

## CLIMATE ACTION PLAN

The key facts you need to know about the proposed Climate Action Plan:

1. The plan would require a 15% water and energy usage reduction in the home prior to point-of-sale.
2. These mandates account for less than 1% of the total Greenhouse Gas (GHG) reductions estimated in the plan. (A small result at a very high cost.)
3. SDAR support upgrades through alternative financing methods, incentive based programs, and various programs that don't require the upgrades be done at point-of-sale.
4. Overall, SDAR is supportive of a healthy San Diego and many other components of the plan that reduce GHG emissions.

SDAR needs members to make calls to council members and join us at San Diego City Hall during key votes to stop the mandatory point-of-sale retrofits. To volunteer for the SDAR action team, please e-mail [govaffairs@sdar.com](mailto:govaffairs@sdar.com).
